

# U-Step 2

Specifically for  
Neurological  
Conditions

Prevents  
Falls

## The U-Step 2 Walking Stabilizer

.....was designed to increase independence and eliminate falling among those with neurological conditions. The leading-edge features of the U-Step 2, as compared to other walking aids, make it superior by providing more stability, maneuverability and control. Tens of thousands of people with neurological conditions have benefited from the U-Step 2 design.

Regularly prescribed by physicians and physical and occupational therapists from leading hospitals and

rehabilitation centers, and covered by most major insurances and Medicare, the U-Step 2 has been tested and proven to be beneficial for patients with various neurological conditions, including:

- Parkinson Disease • Multiple Sclerosis
- Balance Disorders • Brain Injuries
- ALS • PSP/MSA • Ataxia • Stroke

It's ALL About.....the **BASE!**

Stability...

Control...

Our patented U-shaped base, is ultra-stable. It surrounds you and braces you in every direction from falling. You feel as stable as you would feel holding onto another person's arm. Other walkers only partially brace you from falling.

The advanced control features play an important role in the security that the U-Step provides you. The reversed braking system and the rolling resistance control explained inside are exclusive to the U-Step 2 and put you in complete control.

Maneuverability...

By placing the main turning wheels towards the middle of the base, as opposed to in the rear as in other rolling walkers, the U-Step 2 turns around in 29 inches as compared to 50 inches for most other advanced walkers. This will allow you to turn in tight indoor areas, such as washrooms, kitchens, and hallways. At 23 inches wide, you can easily walk through narrow doorways.

# U-Step<sup>2</sup> Advanced features to address your walking needs

## Reversed Braking System

The innovative braking system is easy to use and puts you in complete control. The **U-Step 2** will not roll until you lightly squeeze either hand brake. Once you release the hand brake, the unit

will stop immediately. This feature is particularly helpful when standing up from a chair because the unit will not roll away from you.

## Rolling Resistance Control

Unlike other rolling walkers, you can adjust the rolling speed of the new **U-Step 2**. Many people find that wheeled walkers roll too fast for them. That is why we

engineered a control for setting the rolling resistance. Loosen the set screw and rotate the adjustment lever to the desired amount of resistance, then re-tighten the set screw.

## Spring-Loaded Front Wheel

The patented spring-loaded front caster system glides easily over uneven surfaces, such as indoor molding strips and cracks in the sidewalk. This avoids sudden

jolts as well as the need to lift the walker over small obstacles.

## Platform Model

Ideal for Stooped Posture, weak upper body, stroke, brain injury. Highly adjustable for optimal setup.

Model #: US-PC2-PL

## Laser & Sound Cueing Module

This optional feature is primarily used by those with Parkinson's freezing but can be used by anyone with an irregular gait pattern.

This Cueing Module can help get you started, normalize your walking and increase your stride. Press the red button on the module to project a bright red laser line on the floor to guide your step. You can also turn on the sound feature to set a beat pattern for walking speed.

## Easily Transported

Folding the **U-Step 2** is as easy as one, two, three! Lift the release lever by the seat, pull up on the seat support to fold and put it in the car; no bending down to pick it up.

## Comfortable Padded Seat

"I stopped falling! When I bought my **U-Step 2** walker, the results were nothing short of a miracle. I immediately felt safe, as if the walker were a natural extension of my body. It is lightweight, easy to operate and a far more dignified design than other walkers that I tried."

— Ralph Bakery, Los Angeles, CA

## U-Step 2 Walking Stabilizer Specifications

### Passive Control Specifications Model #: US-PC2-PL

Model number .....	US-PC2-PL
Medicare code (HCPC) .....	#E0147
Weight capacity .....	375 lbs
Height adjustment range .....	
.....accommodates users 4'10" to 6'2"	
Height customization .....	available
Size of Padded Seat .....	19" x 8"
Height from floor to seat .....	22"
Overall width .....	23"
Length .....	25"
Turning circle .....	29"
Weight .....	27 lbs
Material of frame .....	
.....Tubular Steel and Aluminum	

— Patented —
