

When **Pride® Mobility** introduced its patented **EZ Turn** technology on the **Go Go Elite Traveller® 2** mobility scooter, it established a new industry standard. For the first time on a travel scooter, users could experience **3-wheel turning ability** while maintaining **4-wheel stability**.

Now, we're excited to tell you this **exclusive** technology is expanding its reach.

FDA Class II Medical Device

EZ Turn technology has arrived for the **Victory® 10 4-Wheel**, giving this model the same **tight turning** ability without compromising its familiar stability with four wheels on the ground.

The Victory 10 4W will retain all its **premium features** and the **world's best quality** you've come to expect from Pride, but its **turning radius** will now be just **45.5"**. That's a dramatic **improvement of 16%** from the previous turning radius of 54".

This can make a **huge difference** in the lives of your customers throughout all their travels and daily activities. They'll have **greater confidence** in navigating tight environments with the **peace of mind** of knowing they still have the stability of four wheels. It truly is the **best of both worlds!**

By expanding the **EZ Turn** collection, we strive to offer your customers more ways to experience this **revolutionary** technology to help them live their best. Contact your Pride Sales Representative to learn more.
